Is it just me or would you not call the data requested in the letter "efficacy" data? Will they actually have that type of data ("movement" and concentration of the ai in the plant structures) or will they just have data like we get for public health pests, i.e. we sprayed this plant, the residue dried then we dumped some insects on it to see if they died?

IRB: yesterday I sent a letter signed by Steve Bradbury to all the neonic registrants of products used outdoors, please see attached.

A second letter will be going out in the next few weeks that has new labeling that they are expected to put on their labels. There will be a quick turn-around time. We will be reviewing the labels with help from possibly PRD and/or FEAD. We expect several hundred labels. I'll explain at the next branch meeting.
